Project 4: SOCKS 4

NP TA 奎廷

12/22 18:20

Project 4 Deadline

Demo: 12/24 Thur.

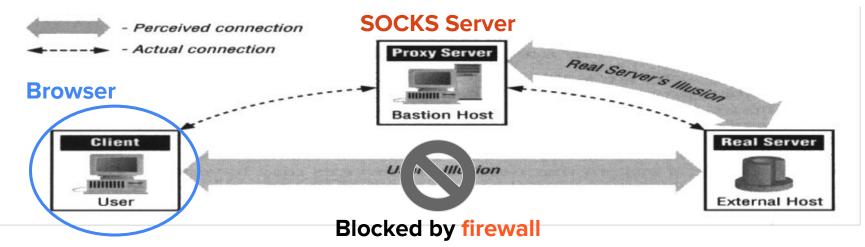

Project Requirements

- I. SOCKS 4 Server **Connect** Operation
- II. SOCKS 4 Server **Bind** Operation
- III. CGI Proxy
- IV. Firewall

I. Connect Operation

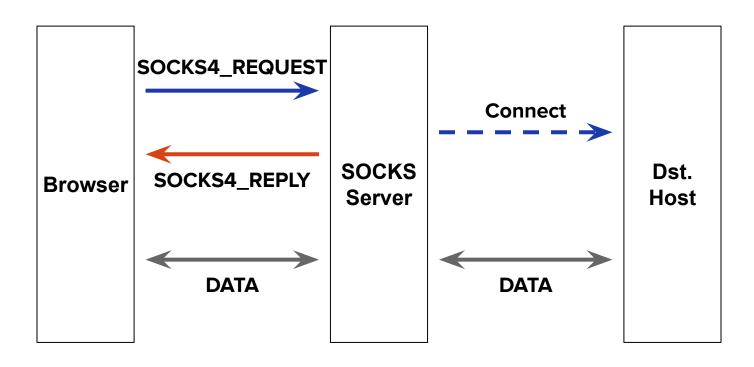

Connect Request

A client wants to establish a connection to an application server

ref. proxy.ppt, p.2

Connect Operation (HTTP Example)

SOCKS4_REQUEST

4	1	80	140	113	43	7	0	
---	---	----	-----	-----	----	---	---	--

- VN is the SOCKS protocol version number and should be 4
- CD is the SOCKS command code and should be 1 for CONNECT request
- NULL is a byte of all zero bits

SOCKS4_REQUEST (SOCKS 4A)

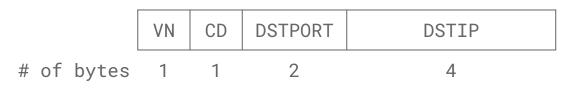

If the client cannot resolve the destination host's domain name itself

г								
	VN	CD	DSTPORT	DSTIP	USERID	NULL	DOMAIN NAME	NULL
# of bytes	1	1	2	4	variable	1	variable	1

1 80 0 0 0	0	'w' 'w' 0
------------	---	-----------

- DSTIP should be 0.0.0.x with nonzero x
- The SOCKS server resolves the domain name
- You may test with `curl --socks4a <host[:port]> <URL>`

SOCKS4_REPLY

- VN is the version of the reply code and should be 0
- CD is the result code:
 - o **90**: request granted
 - o **91**: request rejected or failed
- DSTPORT and DSTIP fields are ignored in CONNECT reply

SOCKS Server Messages

Your server should print messages in the following format:

- <S_IP>: source ip
- <S_PORT>: source port
- <D_IP>: destination ip
- <D_PORT>: destination port
- <Command>: CONNECT or BIND
- <Reply>: Accept or Reject

```
<S_IP>: 114.34.225.168

<S_PORT>: 10089

<D_IP>: 140.113.199.168

<D_PORT>: 443

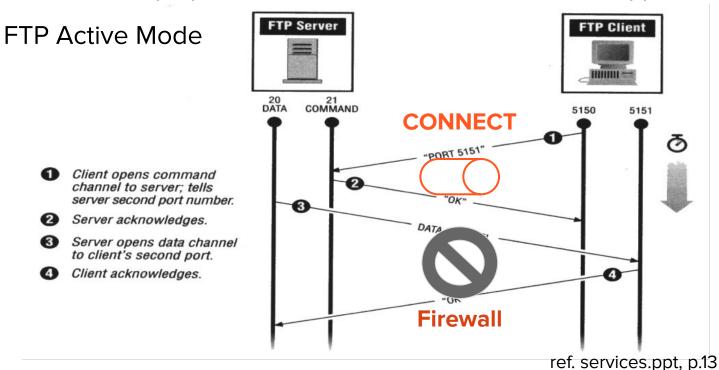

<Command>: CONNECT

<Reply>: Accept
```

II. Bind Operation

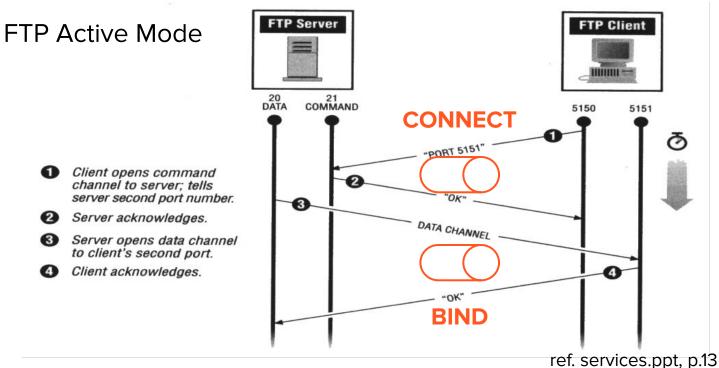

Bind Request

A client wants to prepare for an inbound connection from an application server

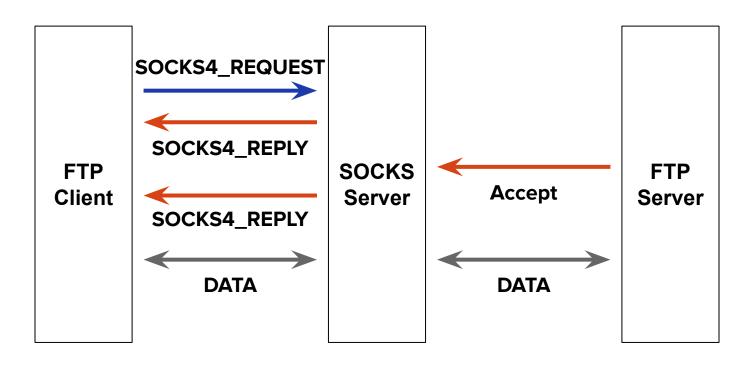

Bind Request

A client wants to prepare for an inbound connection from an application server

Bind Operation (FTP Example)

SOCKS4_REQUEST

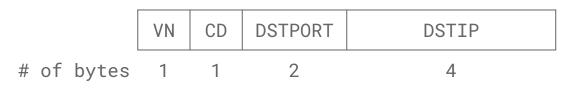

Example:(Bind)

4 2 20 140 113 9	9 151 0
------------------	---------

- VN is the SOCKS protocol version number and should be 4
- CD is the SOCKS command code and should be **2** for **BIND** request
- NULL is a byte of all zero bits

SOCKS4_REPLY

0 90 55 11	0 0	0 0	
------------	-----	-----	--

- VN is the version of the reply code and should be 0
- CD is the result code:
 - o **90**: request granted
 - o **91**: request rejected or failed
- DSTPORT and DSTIP fields are meaningful in BIND reply

FTP Server / Client

- FTP Server
 - You should setup your own FTP server for testing
 - o E.g., FileZilla Server
- FTP Client
 - We will use **FlashFXP** (<u>link</u>) as FTP client
 - The client has to support FTP Active Mode with Proxy on

FlashFXP Setup

III. CGI Proxy

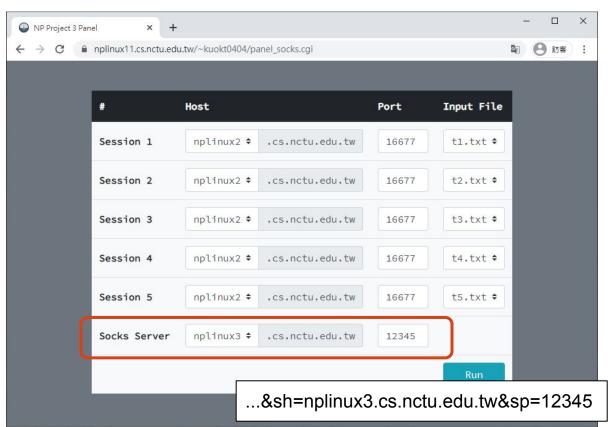

CGI Connection (Project 3)

CGI Connection with SOCKS

panel_socks.cgi

Details

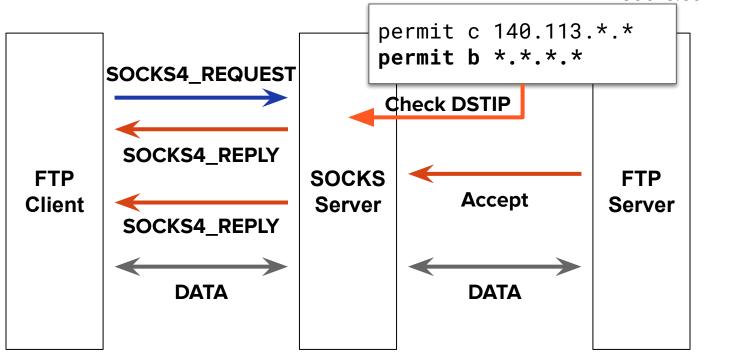

- Modify Project3 console.cpp to implement SOCKS 4 client (hw4.cgi)
 - In QUERYSTRING, there will be sh=<SocksHost>&sp=<SocksPort>
- panel_socks.cgi will be provided
- Testing steps
 - Close proxy setting of your browser
 - Put test_case, panel_socks.cgi and hw4.cgi in ~/public_html
 - Run your socks server and np_single_golden on nplinux
 - Connect and run panel_socks.cgi
 - E.g., nplinux2.cs.nctu.edu.tw/~<yourname>/panel_socks.cgi

IV. Firewall

Connect Operation (Deny all traffic by default) socks.conf permit c 140.113.*.* permit b *.*.* SOCKS4_REQUEST **Check DSTIP** Connect SOCKS Dst. **SOCKS4 REPLY Browser** Host Server **DATA DATA**

Bind Operation

(Deny all traffic by default) socks.conf
